Abstract. This thesis examines the role of information technologies in modern foreign language teaching. It analyzes the educational opportunities provided by digital platforms, multimedia resources, interactive applications, and artificial intelligence tools. Particular attention is paid to their contribution to developing students' reading, listening, speaking, and writing skills. The study emphasizes that the effective integration of digital technologies increases students' motivation, supports independent learning, and creates favorable conditions for improving communicative competence.

Keywords: information technologies, foreign language teaching, digital education, interactive learning, multimedia resources, communicative competence, educational platforms, artificial intelligence.

INTRODUCTION

In the era of globalization and rapid technological development, foreign language proficiency has become an important requirement in education, science, and professional activities. The growing demand for international communication requires educational institutions to improve language teaching methods and introduce modern technologies into the learning process.

Information technologies have created new opportunities for organizing foreign language lessons. Digital platforms, electronic textbooks, online dictionaries, educational videos, and interactive applications enable students to acquire language knowledge in a more flexible and engaging way.

The application of information technologies makes the educational process more interactive and student-centered. Unlike traditional teaching methods, digital resources allow students to access authentic language materials, practice independently, and receive immediate feedback.

Modern technologies contribute to the development of four basic language skills:

- **Reading:** Online articles, electronic books, and digital texts improve reading comprehension and vocabulary.
- **Listening:** Podcasts, video lessons, and audio recordings develop listening skills and pronunciation awareness.
- **Speaking:** Video conferencing, online discussions, and artificial intelligence applications provide opportunities for oral communication.
- **Writing:** Digital writing platforms and grammar-checking tools support the development of written communication skills.

Platforms such as Moodle, Google Classroom, Quizlet, Kahoot!, and Wordwall can be effectively integrated into foreign language lessons. They provide opportunities to organize assignments, conduct interactive tests, practice vocabulary, and monitor students' progress.

Another important development is the use of artificial intelligence in language education. AI-based applications can generate exercises, explain grammatical structures, simulate conversations, and provide feedback on students' written work. However, these tools should be used critically and under the guidance of teachers.

The effective use of information technologies offers several pedagogical advantages. First, it increases students' interest and motivation through interactive learning activities. Second, it supports

individual learning by allowing students to study at their own pace. Third, it provides access to authentic materials and creates opportunities for communication beyond the classroom.

Furthermore, digital technologies encourage students to develop independent learning skills, digital literacy, and responsibility for their own educational progress.

At the same time, teachers should consider certain challenges, including unequal access to the internet, insufficient digital competence, and excessive dependence on automated translation tools. Therefore, technology should complement traditional teaching methods rather than completely replace direct communication and teacher guidance.

CONCLUSION

Information technologies have become an essential component of modern foreign language education. Their purposeful integration into the teaching process creates opportunities to improve students' language skills, increase learning motivation, and develop communicative competence.

The combination of traditional teaching methods with digital platforms, multimedia resources, interactive applications, and artificial intelligence can make foreign language learning more effective and accessible. Consequently, teachers should continuously improve their digital competence and select technological resources according to educational objectives and students' needs.
